about us

With roots dating back to 1986, Zerkaya Textile Medical Company is a well-established and sophisticated family business. This journey began with textiles as the beginning point. And we've always been focused on our beginning point. This is where we perform all of our modeling, printing, and product development.

We began producing medical products using our years of experience in the textile industry at the start of the pandemic phase by including the promise that each crisis brings its unique chances.

Our company has a range of qualification certificates, product test reports, and CE marking, to name a few, to demonstrate our quality and standing as a high-level manufacturer. Today, our company is a diversified enterprise with a proud presence in the textile, medical, fabric, food and apparel industries.

As the main, Zerkaya Medical was established in 2017 as the cornerstone of our multi-company family. We quickly established our young and active foreign commerce department, which speaks six languages and has a large product network, as well as our fabric department, which is known for its diversity and quality. And now with a high capacity medical product manufacturing factory that uses cutting-edge gear, we're enhancing our reputation.

Our company, which exports to more than 18 countries, has acquired visions of sincerity and trust since 1989.

Our endless thanks to all our stakeholders we work with.

Mustafa KAYA on behalf of Zerkaya company

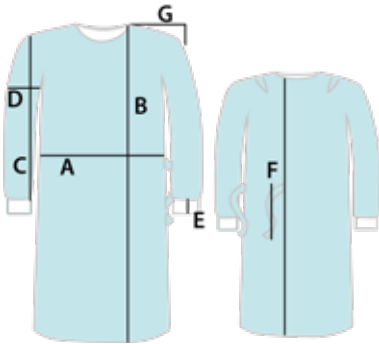

An innovative product

Meet our washable innovative gown, which can perform the same as conventional disposable laminated gowns.

Made of strong and innovative plastic fabric, this gown is much stronger, durable and long-lasting than other plastic gowns. Because of soft texture, it allows comfortable use and it is antibacterial.

It is sewn with traditional thread sewing methods.
Non-iron, non-printing, non anti-static, latex-free.

Here is a picture of our overalls, which we are proud of because of their great quality and high degree of hygiene and protection.

Because of the blue stripes at the seams, this fabric has been approved by several laboratory about reducing bacteria and air absorption. The rubber on the side cuffs also contributes to a reduction in bacteria and air permeability.

They're all made employing a sewing technique that's similar to overlocking. Because of the close seam spacing, it offers complete protection. It is a one-time use item. antimicrobial, antistatic, and water and splash resistant

It was sewn with the needle number 9 using classical methods. All of them are produced with a sewing technique close to the overlock. It provides full protection thanks to its tight seam spacing. It is disposable, antibacterial, antistatic, highly resistant to water and splashes.
